

This article covers tweaking username and disabling chat logs in VideoWhisper Video Conference Component for Joomla (hopefully future versions will include parameters / features in the interface to control these).

This can also be used / adapted for other components that use similar structure.

In componentscom\_videowhisper\_conferencemodelsflash.php:

1. Change username to some other variant (username, id) instead of `$user->get('name')`

```
$user =& JFactory::getUser();
```

```
if (!$user->get('id')) $loggedin=0; else $loggedin=1;
```

```
if (!$loggedin&& !$room->visitors) $message=" Please login to your account first \(on member frontend\)!";
```

```
$username=$user->get('name');
```

### 2. Comment out chat log writing

```
case "chatlog":
```

```
...
```

```
/*
```

```
    $dfile = fopen($path."uploads/$room/Log$day.html","a");
```

```
    fputs($dfile,$message."  
");
```

```
    fclose($dfile);
```

```
*/
```
